Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. Prioritize visible content that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 43% of the final above-the-fold content could be rendered with the full HTML response.

In our test, your server responded in 0.30 seconds.

There are many factors that can slow down your server response time. Please read our recommendations to learn how you can monitor and measure where your server is spending the most time.

Minify CSS

Compacting CSS code can save many bytes of data and speed up download and parse times.

Minify CSS for the following resources to reduce their size by 1.4KiB (26% reduction).

- Minifying http://paysell.al/themes/user/surfow6/assets/css/hintvr.css could save 800B (35% reduction) after compression.

- Minifying http://paysell.al/themes/user/surfow6/assets/css/slider.css could save 201B (25% reduction) after compression.

- Minifying http://paysell.al/themes/user/surfow6/assets/css/slider.html5.css could save 191B (27% reduction) after compression.

- Minifying http://paysell.al/themes/user/surfow6/assets/plugins/charts-c3/plugin.ltr.css could save 160B (15% reduction) after compression.

- Minifying http://paysell.al/themes/user/surfow6/assetsvr0/css/metismenu.min.css could save 125B (18% reduction) after compression.

Minify JavaScript

Compacting JavaScript code can save many bytes of data and speed up downloading, parsing, and execution time.

Minify JavaScript for the following resources to reduce their size by 619B (19% reduction).

- Minifying http://paysell.al/themes/user/surfow6/assets/js/onready.js could save 222B (19% reduction) after compression.

- Minifying http://paysell.al/themes/user/surfow6/assets/js/core.js could save 168B (19%

reduction) after compression.

- Minifying http://paysell.al/themes/user/surfow6/assetsvr0/pages/jquery.slick.init.js could save 117B (34% reduction) after compression.

- Minifying http://paysell.al/themes/user/surfow6/assets/js/functions.js could save 112B (14% reduction) after compression.

Optimize images

Properly formatting and compressing images can save many bytes of data.

Optimize the following images to reduce their size by 32KiB (67% reduction).

- Compressing and resizing https://stocktrading.financialplugins.com/images/avatar.jpg could save 21.6KiB (97% reduction).

- Compressing and resizing https://stocktrading.financialplugins.com/images/logo.png could save 5.5KiB (83% reduction).

- Compressing https://www.silveuscropins.com/wp-content/plugins/hummingbird-performance/admin/assets/image/icon-uptime.png could save 4.9KiB (27% reduction).

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. Prioritize visible content that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 37% of the final above-the-fold content could be rendered with the full HTML response.
